

EXTERIOR PAVING: NATURAL FACED ROACH

Purbeck Roach makes excellent exterior paving. As this bed of stone naturally occurs in slightly smaller blocks than other beds and in irregular shapes and sizes, choosing this set width and random length format allows for the most efficient and therefore cost-effective use of each block. Natural Faced Roach paving is split, giving it a natural face on both the top and bottom of each piece. Lengths are usually not less than square and up to twice the 300mm width.

UNIT SIZES: Width 300mm; random lengths;
thickness 30-60mm

FINISH: Split / Natural Face

EDGES: Base- Split; Sides and ends- Sawn

THICKNESS: 30-60mm

SAMPLE SIZE SHOWN: 1m²
