

## DRESSED WALLING

Dressed walling is mainly used for house building and mortared garden walls. This product is supplied in bed widths of 100mm-125mm (4") and 125mm-150mm (5"). We occasionally have requests for thicker beds. Dressed walling is first guillotined, and then hand-worked by a stonemason. The face of each stone is pitched around to produce crisp edges and a convex face. It is important when laying the stones to ensure that they are bedded correctly and coursed. The build area for dressed stone is almost the same as guillotined; 1 tonne will build approximately 4.4m<sup>2</sup> of face.

FRONT FACE: Guillotined and Dressed

OTHER FACES: Guillotined or Natural Face

FRONT TO BACK (ON BED): 100-125mm or 125-150mm

LENGTHS AND HEIGHTS: random

THICKNESS: random
