

WALLING: DUBBERS

Unit Dubbers are supplied for house building. They are sawn-bedded making them easier to lay than dressed or guillotined walling. They have straight crisp edges, top and bottom, with a dressed face and split sides.

We usually supply gauged heights of 65mm, 143mm and 217mm, which are usually 100mm on bed. Our usual mix is 60% 65mm, 30% 140mm, 10% 215mm. We can cut other guages if required.

Random Dubbers are also sawn-bedded with a dressed face, but are supplied in random heights, Again, they are usually 100mm on bed. All dubbers are sold by the M².
