

GUILLOTINED WALLING

Guillotined walling is mainly used for house building and mortared garden walls. This product is supplied in bed widths of 100mm-125mm (4") and 125mm-150mm (5"). We occasionally have requests for thicker beds. The stone is supplied as it has been split by the guillotine. The stone is not worked to form finished rectangular blocks, so some dressing may be required on site particularly with the 100-125mm on bed. There will always be variation in the bed depth as it is not possible to crack the stone exactly. It is important when laying the stones to ensure that they are bedded correctly and coursed. 1 tonne will build approximately 4.4m² of face.

FRONT FACE: Guillotined

OTHER FACES: Guillotined or Natural Face

FRONT TO BACK (ON BED): 100-125mm or 125-150mm

LENGTHS AND HEIGHTS: random

THICKNESS: random
